

SIGABORT BCR XL CONTROL SURFACE SCRIPT

FUNCTION

This script adds dynamic functionality to the BCR2000 making it an essential MIDI controller for Ableton Live

COMPATIBILITY

The BCR_XL script provided is compatible with Ableton Live 9.6 and higher, please refer to the website before upgrading your Live Installation to ensure compatibility. We will continue to update our scripts for all versions of Live 9, all updates will be sent automatically to the email address used when purchasing.

PrEDITOR & LAUNCHSYNC

The BCR_XL script is firstly compatible with our PrEditor Mapping Utility which allows you to configure the exact order of parameters that are mapped when in focus of the Device Control Scene of the script. - [MORE DETAILS](#)

In addition the BCR 2000 can be synced with other supported controllers by way of our LaunchSync Series of MaxforLive devices, a simple way of adding Fader and Encoder control to an Ableton Push or Novation LaunchControl - [MORE DETAILS](#)

INSTALLATION

Download the provided ZIP file and unzip the contents to your hard-drive.

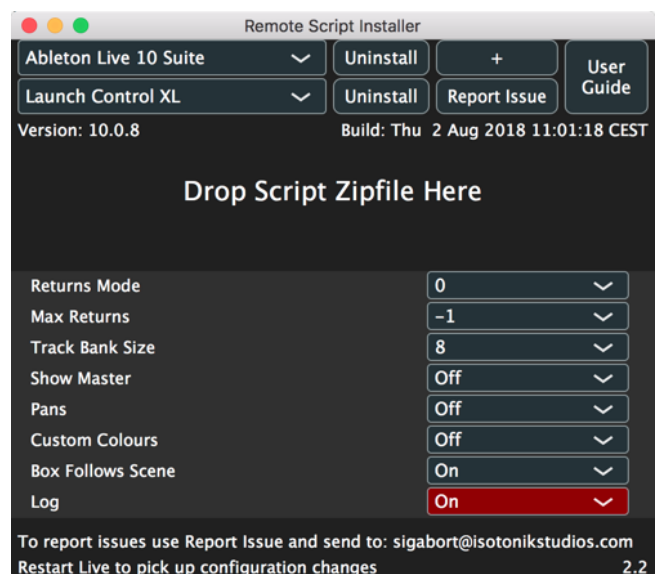

Open the provided Isotonik Remote Script Installer.pkg or .exe and follow the steps indicated by the installer, this will then place the Remote Script Installer within your applications.

Within the installer window select the version and location of your Live installation, click the + button to Add any custom location of Live. To install any script simply drag the zip file for the script onto the indicated area.

By selecting an installed script you can also change the configuration as detailed later in this document.

The Remote Script Installer will also have a button that's linked to the location of the User Guides on your Hard-drive.

Finally we've provided a Report Issue option that will produce the files that we would need in order to support you should anything not be working as you'd expect. Please see the end of this manual for how to report any issues and request support

OPERATION

The high level operation of the controller can be switched between two modes: Locked and Free.

This is determined by the Preset entry within the Isotonik Remote Script Installer.

Locked Mode - Preset = 0

In this mode the preset controls on the BCR are disabled and it is not possible to change presets whilst the controller is in operation.

This mode is enabled by setting a value of 0 in preset.txt.

Free Mode - Preset = 1-32

This mode allows you to change presets whilst using the controller to allow you to MIDI map other presets within Live. In order to use this mode you need to provide a preset (1-32) which will be used for the controller. This preset number should be entered into preset.txt.

Note: Using this mode will cause the existing preset to be overwritten and replaced.

Note: This is not the default mode when you first install the software as we do not want to overwrite any presets that you may have before you get chance to re-organise/back them up.

Upon startup the BCR will be placed into the designated preset.

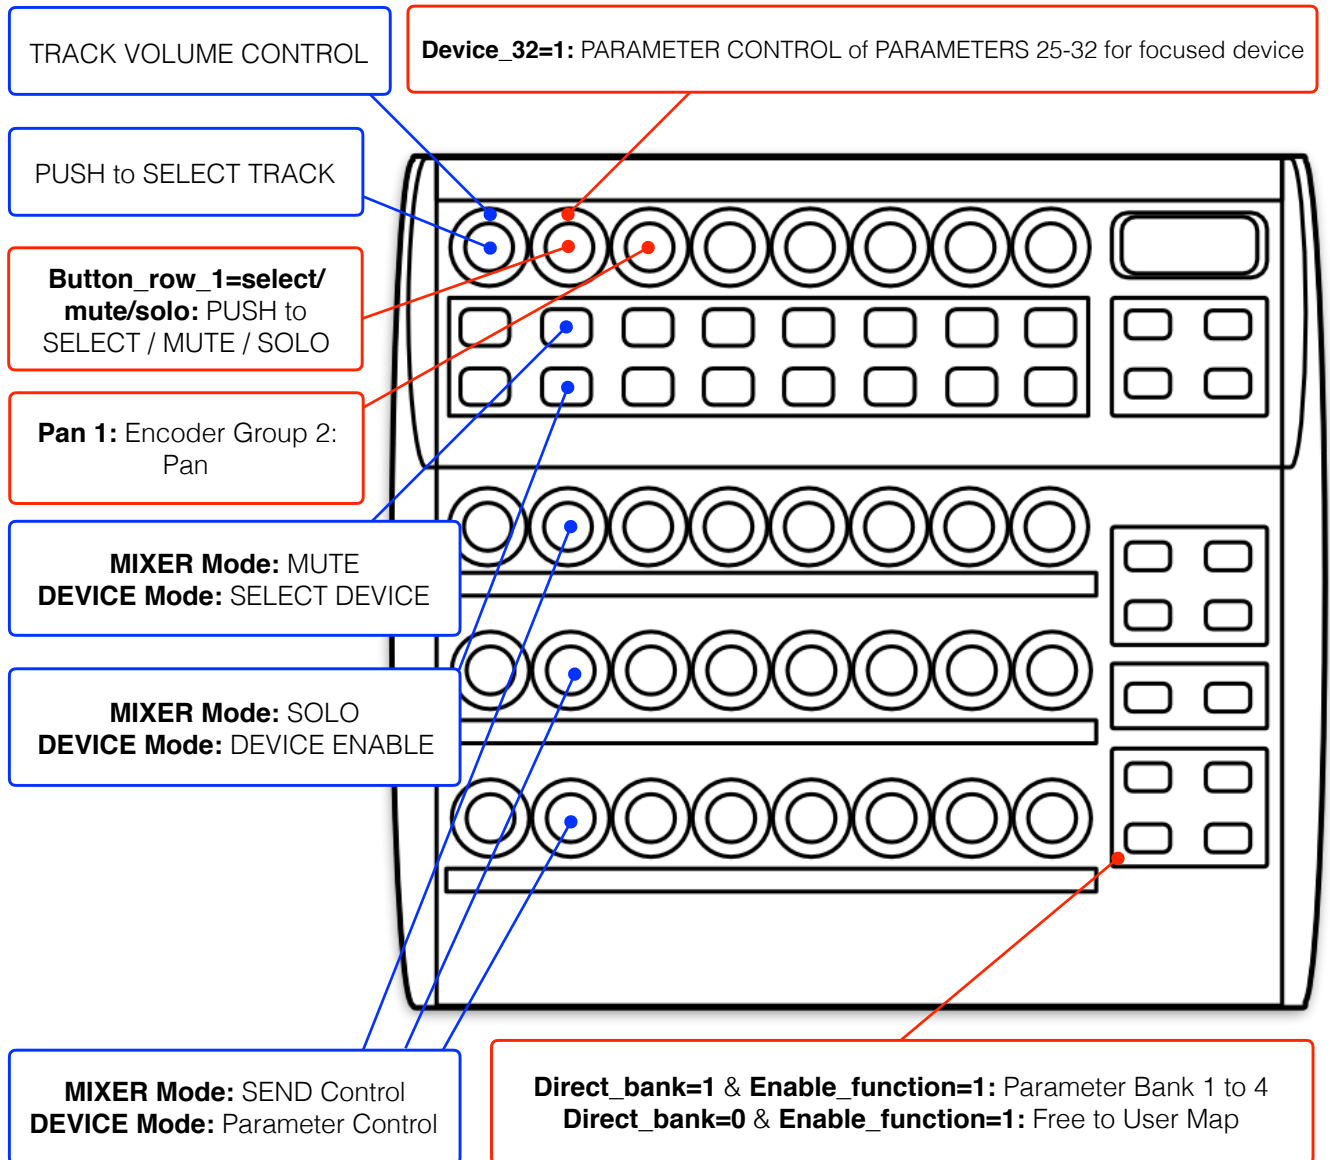

Function Modes

BCR XL operates in two modes: Mixer mode and Device mode (switchable by one of the control buttons). The function of the buttons and encoders will change depending on which mode is being used. The controller will default to Mixer mode upon startup.

LED rings around the encoders will be illuminated when the encoder has a valid assignment in Live. The LED rings will be updated to reflect the current values in Live as you move around the set and as changes are made in Live.

BLUE = STANDARD OPERATION **RED** = CONFIGURATION OPTION

Selecting the Master Track In Device Mode

It is possible to select the Master track when in device mode by selecting the currently selected track, i.e. if track 3 is selected then using track select to select track 3 again will select the master track and allow devices to be controlled as with other tracks.

BLUE = STANDARD OPERATION **RED** = CONFIGURATION OPTION

Mixer Mode

Fold/unfold current track is only available when illuminated, i.e. if current track is a group.

CONFIGURATION OPTIONS

The Isotonik Remote Script Installer contains number of configuration options to tailor the operation of BCR XL. After making any changes close Live and restart for the changes to take effect.

Preset

The preset to be used for Live operation. If 0 is used then no presets are overwritten on the BCR but you will not be able to change presets during operation.

Device_32

If set to 1 then in device mode all 32 encoders will be available for device operation, rather than leaving the top encoders as volume controls and using the remaining 24 for device.

Enable_function

If “Enable_function 1” then the function section of the BCR is used for control operations and the bottom 4 buttons remain free for user mapping.

If Enable_function is set to 1 then the function buttons take over the operation listed in the Control Buttons section and the control buttons are available for your own mappings.

If Enable_function is set to 0 then these buttons retain their standard BCR functionality.

Track_navigation

If Track_navigation is set to 1 then the bottom two buttons operate track left and track right for the session. If you are using the BCR as a slave device for LaunchSync and session movement is controlled by another controller then you can set this to 0 to have access to all 4 encoder groups.

Button_row_1 (Default in BOLD)

Operation performed by the push encoder buttons: **select**, mute, solo, arm

Button_row_2 (Default in BOLD)

Operation performed by the top row of buttons buttons: select, **mute**, solo, arm

Button_row_3 (Default in BOLD)

Operation performed by the bottom row of buttons buttons: select, mute, **solo**, arm

Button_reselect_track (Default in BOLD)

Operation performed when reselecting the same track: select, mute, solo, arm, **fold**

Direct_bank

Enable/disable direct bank mode.

14_Bit

If set to 1 then the main 32 encoders on the BCR send 14-bit updates – this increases the resolution of each control for finer adjustments.

Pans

If set to 1 then then encoder group 2 is mapped to Pan control for each track.

Track_Bank

If provided this changes how many tracks are moved left or right when banking in session.

Returns_mode

Determines how return tracks are handled:

0 – return tracks are not displayed

1 – return tracks are displayed, right justified, but normal tracks take priority and return tracks may need to be scrolled into view.

2 – return tracks are displayed, right justified, but return tracks take priority and will always be displayed.

3 – tracks and return tracks are toggled via a control button with one or the other being in view.

4 – tracks are displayed and return tracks are toggled as an overlay, right justified, via a control button.

Max_returns

The `Max_returns` config setting can be used to limit the number of return tracks that can be controlled (if you have a large number in the set but don't want all of them to appear on the controller). Setting this to a value of -1 will disable this feature.

Show_master

Toggles whether master track is displayed or not. The master track is always fixed at the right hand side of the controller.

Transport

Toggles whether transport controls are provided. This is only valid if `Enable_function` is 1.

Dynamic

This determines whether the BCR will enable/disable encoders and buttons to reflect current Live state with respect to the number of tracks currently in use and the number of parameters available for device control. It is recommended that you leave this set to 1 as it provides much clearer feedback. However, this does cause slight update delays (usually these won't have a negative impact) and can be turned off by setting this value to 0.

Log

Whether to write entries to the log file. For use when reporting issues to the Isotonik team

SUPPORT

For support issues please email sigabort@isotonikstudios.com or complete the support request form by visiting the Orders section of your account on the website and choosing the order that you placed to order the product.

In all cases please include the files produced when opening the Isotonik Remote Script Installer and pressing the “Support Request” button. Without these files we will be unable to support your request.
