

ClyphX Pro for Ableton Live 12.1

new actions

In this release we included new actions, please refer to [Schlapbe's user actions for Ableton Live 12.1](#) for further documentation and help.

Pop Up

You will also find the ClyphX Pop-up Max4Live device made by chainsawart. You can map the button to a key or midi and a Dialog Window will pop up where you can enter ClyphX actions directly. You can't copy/paste with Keyboard Shortcuts, however there is also a Device "ClyphX Action List Viewer" with a bigger area to edit, here Cmd-C and Cmd-V will work.

Lastly there is a saved version of the Note Trigger Rack which you can simply add to your User Library.

Enjoy!
