

SONG:MODE 2.0 Changelog

SONG:MODE just received a big update, here are the main features:

SONG:MODE now works for both Session and Arrangement views, displaying accordingly Scenes or Markers.

For each view, there are **2 layouts**:

- The **"Simple"** layout is very straightforward, with **1 Pad = 1 Scene or Marker**, and works straight out of the box.
- The **"Advanced"** layout allows you to **group Scenes or Markers into "Songs"**, as this was already the case on SONG:MODE 1.0.

Other new features:

- **Toggle between Arrangement and Session** views from the controller
- **Set a Loop in Arrangement** by holding several pads, release the Loop from the controller
- **Add colors to Markers, Scenes or Songs** directly from the controller
- **"Safe/Restart" function** to always launch playback from the last position or in case of accident
- **When adding (STOP)** to a Marker or Scene's name, Live will stop
- **Stop All Clips / Back to Arrangement** button
- **Arrangement Record** (Only for Push 1 & 2 and Launchpad X)
- Improved the way SONG:MODE is activated on Launchpad Mini MK3 and Launchpad X
