

# SECTIONS

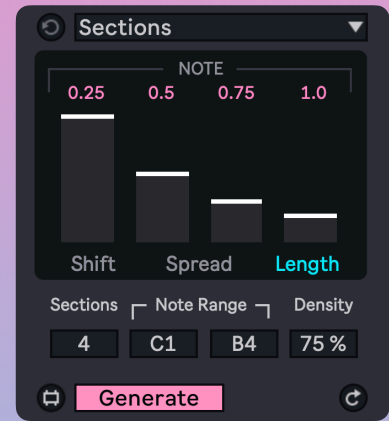

The Sections MIDI Generator for Live 12 generates random notes distributed over user defined sections within a MIDI clip.

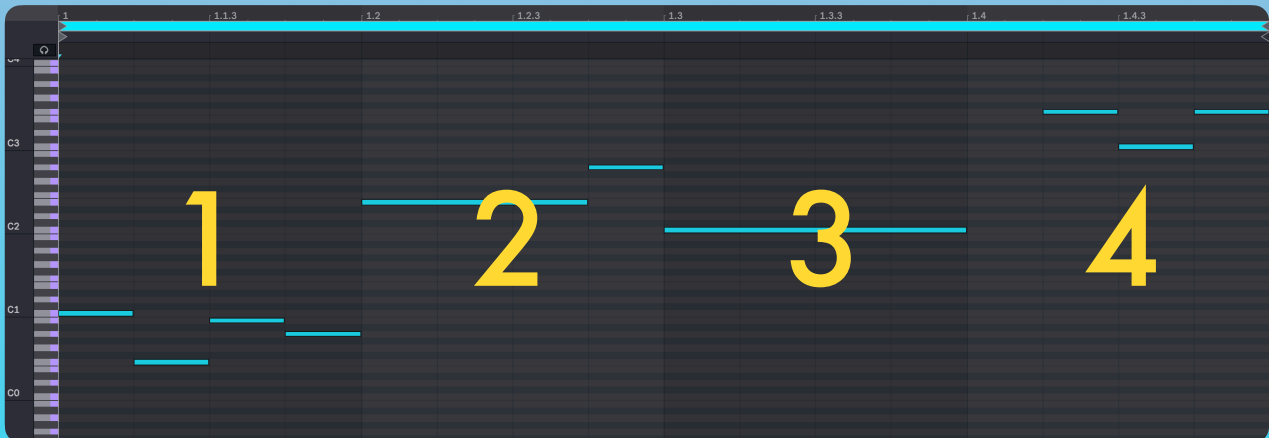

The **'Shift'** section provides sliders that offset randomly generated notes over the number of sections allow you to create an ideal pattern or shape for the notes to follow.

The **'Spread'** section provides sliders that determine the pitch distribution of the randomly generated notes allowing different sections of a clip to have wider or narrower pitch ranges.

The **'Length'** section provides 4 sliders that set the probability of different note lengths for randomly generated notes. The options are: 0.25, 0.5, 0.75 and 1.0.

Sections ▾ Note Range ▾ Density  
4 C1 B4 75 %

**Sections:** set the number of sections to divide a clip into when generating random notes.

**Note Range:** Set a lower and higher range for notes to be generated around.

**Density:** Determines the amount or chance of new notes being generated.
