Getting started

Thanks for choosing SETWIDE Plugin Dropper. Your licence is personal: it carries your name, covers up to 3 computers you use yourself, and includes every update. Getting it takes a few minutes.

1

Install

Close Live completely, then run the installer for your system from this folder, the PKG on macOS or the EXE on Windows. It places the plug-in and its Ableton integration for you. On Windows, if a blue **Windows protected your PC** message appears, choose More info, then Run anyway.

2

Set up Live, once

- **Settings > Link, Tempo & MIDI**: in the Control Surfaces table, choose SETWIDE on a free row. Leave Input and Output on None.
- **Settings > Plug-Ins**: turn on Use VST3 Plug-In System Folders, or Use Audio Units v2 on macOS, then Rescan.
- **In the same tab, set Auto-Open Plug-In Windows to Off.** This one matters, otherwise every insertion opens a plug-in window.
- Also set Auto-Hide Plug-In Windows to Off and Multiple Plug-In Windows to On, so the SETWIDE window stays open.

3

Activate with your code

Drag SETWIDE onto any track, a dedicated one is cleanest, and open its window. It asks you to activate your copy: paste the code from your Isotonik order, enter your full name and your email address, accept the licence agreement and click Redeem and activate. Your name is sealed into your licence, so check it first. This first activation needs an internet connection. Then pick your devices, tick your tracks and click Apply.

```
SW-XXXX-XXXX-XXXX-XXXX
```

4

Keep your licence email

It arrives from info@setwide.com within minutes, with your personal download link, which also works as your activation code. Keep it: each new computer asks for it once, and the link always offers the latest version. Nothing there? Check your spam folder. You can also redeem your code on the web, at **setwide.com/isotonik**, and install from the link in that email.

REQUIREMENTS

Ableton Live 12
macOS 11 or later, Apple Silicon or Intel, VST3 and Audio Unit
Windows 10 or later, VST3
Max for Live not required
